VIDEO CALL AI

AI Coaching Companion Empowering Remote Interactions

PROJECT CONCEPT

TEAMS MEETING HOST

APPLICATION USER

The Project:

Video Call AI is an AI coaching companion aimed at helping organisations, teams, and individuals unlock their potential for better interactions in an evolving remote work era. The rapid evolution of machine learning, computer vision, and natural language processing techniques enables the creation of the ultimate real-time coaching AI tool by amalgamating knowledge from these domains.

Current Progress and Next Steps:

The current prototype successfully demonstrates the capability of generating coachable prompts during a video call. Throughout the semester, we focused on reducing latency in coaching advice generation and integrating the prompt AI with the video call platform we adopted. The next step for the project is to enhance the quality of the coaching advice by incorporating relevant domain knowledge.
